

AN INTERACTIVE EVENT FOR PARENTS ONLY

Is mathematics about memorizing methods and procedures?

Is mathematics about getting the right answer?

Do we need to go back to the "basics"?

What are the "basics"?

Are people naturally "good" at math?

Is math hereditary?

What is the best way for my child to learn math?

=====

Get the answers to these questions and other questions you may have about the teaching and learning of math at a special event at Robert Andrews for parents only entitled "Truths and Myths about Math". We

have arranged for an expert, who has studied the research on the teaching and learning of math, to provide an interactive evening for parents. The evening will include explanations, demonstrations, discussion, question-and-answer time – and some light refreshments.

Math seems to be more important now than it ever has been; the growing number of technical-related occupations, and just everyday living, depend on mathematical understanding and logic. It cannot be ignored and, as teachers and learners, we must get it right. Come and join us for an educational event that may just be unlike any event you have ever attended at your child's schools!

Are people naturally "good" at math?

What is the best way for my child to learn math?

Are there "basics" that we need to get back to?

Join us for a research-based presentation and discussion

Wednesday

October 17

6:30 pm
